Genre: VR | Horror | Puzzle
Platform: Meta Quest 2 , 3 , 3s

🎯 Game Jam Theme: Virtual World (AR/VR)

🧩 Problem / Idea

Most VR horror games rely only on jump scares and linear puzzles.
They rarely use **perception and immersion** as core gameplay mechanics.

We asked:
What if reality itself becomes the puzzle?

🔥 Why It Fits the Theme

- Built exclusively for **VR (Meta Quest)**
- Dual-reality switching using a wearable mask
- Spatial puzzles designed for immersive interaction
- Failure reveals hidden paths instead of stopping progress

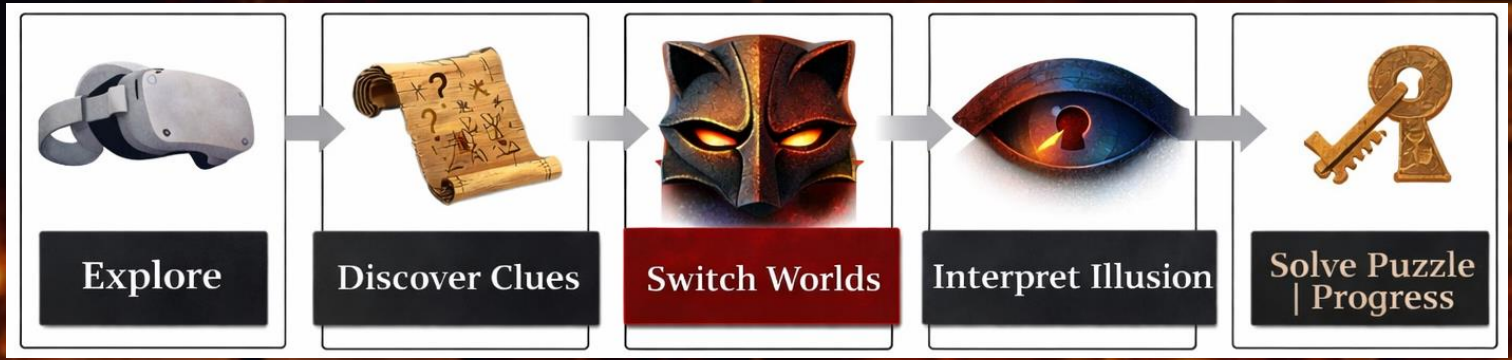
VR is not just the platform — it is the mechanic.

🎮 Core Gameplay Loop

A VR horror treasure hunt where players switch between realities to uncover hidden truths inside a shifting labyrinth.

🎯 Player Objective

Navigate four progressively challenging chambers, interpret illusion versus reality, and unlock the correct treasure chest before time runs out.



🎮 Game Mechanics

🏛 Progression

4 Levels → Increasing Difficulty
Perception-Based Puzzles
Failure Reveals Clues

🏆 Win / Loss

🟢 Open Correct Final Chest
❌ Time Runs Out

🎮 Controls

- Grab & Rotate
- Place Objects
- Wear / Remove Mask
- Move in VR Space

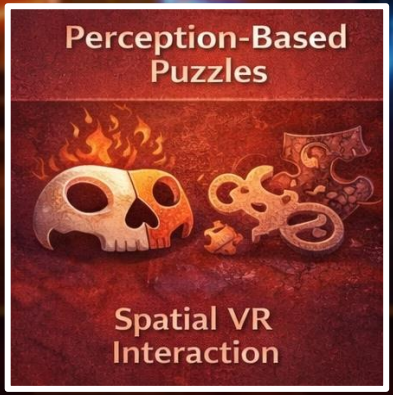
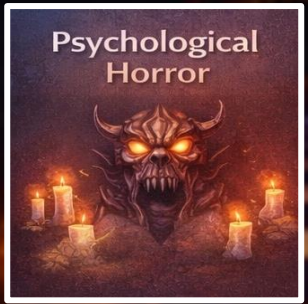
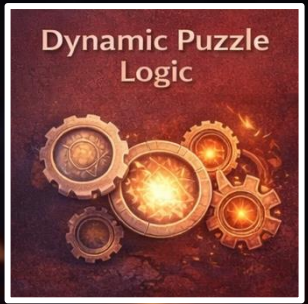
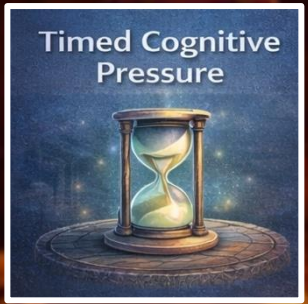
🚀 Innovation & USP

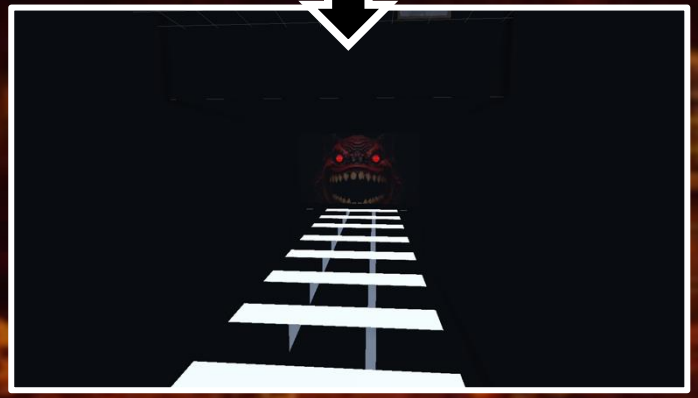








Demo & Visuals



⚙ Challenges and Future Scope

🚧 Technical Challenges

1. Real-Time World Switching
State-driven architecture + layered rendering

2. VR Performance Optimization
Static batching, baked lighting, occlusion culling to achieve 120+ FPS

3. Modular Puzzle System
FSM-based logic + event-driven interactions

🚀 Future Scope

1. Expand Levels
More chambers with procedural puzzle variation

2. Multiplayer Mode
Cooperative VR with synchronized world states

3. Adaptive Difficulty System
AI-driven difficulty scaling based on player performance & decision patterns
